HONEYWELL HOMMED, DATALYTICS LLC ANNOUNCE TECHNOLOGY AND SERVICE AGREEMENT

Companies To Develop Benchmarking Solution To Help Healthcare Providers Improve Efficiency, Reduce Costs

BROOKFIELD, Wis., November 30, 2011 – Honeywell HomMed (NYSE: HON) announced today that it has entered into a technology and service agreement with Datalytics LLC to provide new analytic tools to help healthcare providers better assess patient, staff and financial outcomes to lower overall healthcare costs.

The healthcare market is undergoing many changes, The Center for Medicare and Medicaid Services (CMS) has reduced reimbursement rates to providers, patient disease management is becoming more complex and shortages of clinical resources are expected to increase. Better technology can give healthcare providers the tools to be more efficient, cost-effective and enable them to track performance and improve their operations.

Honeywell HomMed and Datalytics will develop a powerful benchmarking solution that enables data from Honeywell HomMed's LifeStream ecosystem to be integrated with multiple other data sources, allowing healthcare providers to manage their performance and compare their results with other Honeywell HomMed benchmarking customers. This solution enables providers to track, measure and report on the impacts of telehealth programs to achieve better outcomes for their patients.

“The seamless integration of benchmarking tools with LifeStream will drive improved outcomes for healthcare providers and help them achieve lower overall healthcare costs without sacrificing the

quality of care delivered at home for patients,” said Terry Duesterhoeft, president of Honeywell HomMed. “This initiative with Datalytics further extends Honeywell HomMed’s position as the Remote Monitoring Industry leader, and reflects our commitment to expand the LifeStream Ecosystem.”

“The integration of Datalytics’ advanced analytical technology into Honeywell’s HomMed’s LifeStream ecosystem, with its proven services platform, will create a powerful tool for a broad range of healthcare providers”, said Scott Hertel, managing director at Datalytics. “The business intelligence platform will enable providers to benchmark themselves on a wide range of clinical and operational metrics and allow them to perform in-depth analysis of their own organizational data.”

About Datalytics

Datalytics develops data warehouse and business intelligence solutions for healthcare companies via hosted solutions and consulting services with an extensive background in home healthcare and long-term care industries. Datalytics mission is to enable healthcare organizations to leverage the data isolated in their multiple line-of-business information systems to drive strategic decisions as well as operational improvement.
